

FLORA OF BRAZIL

State of São Paulo

No. R 4943 *Poukera brevipes* (Pierre) Pennington  
Fl. neotrop. 52  
*Chrysophyllum soboliferum* Rizz.

Floresta de Angatuba (23°27'S 48°25'W),  
Instituto Florestal de SP.

In a fire-break (aceiro) between a pine  
plantation and the cerrado reserve,  
growing with many other low species, eg  
Parinari, etc.

Subshrub, occurring in patches, stemless or  
with stems to 8 cm. Corolla deep wine-  
coloured. Stamens 5, antipetalous. Flowers  
with a strong scent of bananas with a hint  
of durian. White latex in leaf-base.

Date. 22.11.1983
