

FLORA OF BRAZIL

State of Mato Grosso

No. R 7453V

Luetzelburgia

Vatairea ~~*macrocarpa*~~ (Benth.) Ducke

Nova Xavantina. Reserva Bacaba (Reserve of the Nova Xavantina Campus of the State University of Mato Grosso (UNEMAT)),
14° 40'S 52° 21'W.

Grassy cerrado in a hollow, growing on a termitarium.

Tree, 8m tall, 22 cm dbh with smooth fawn bark which scales irregularly below (young trees have completely smooth bark). This form always seems to establish on termitaria (cupinzeiros) and is very common in the area. It is growing about 8m from the superficially similar R7452V which Edson Lima (who has a great knowledge of the local flora) considers a distinct taxon.

Date: 7.iv.1996
