

*Polygalaceae*

FLORA OF BRAZIL

State of Mato Grosso

No. R7583

*Bredemeyera floribunda* Willd.

20km from Tatuapé on the road to Itiquira, 16° 59'S 54° 03'W

In cerradão growing on rocks.

Multi-trunked slender tree with taller shoots 5m tall, 5cm dbh.

~~Some trees of the population are much larger (one multi-trunked specimen is growing straight out of the rocks and its thickest trunk is 8m tall and 15cm dbh, with pale bark finely fissured in a vertically elongated reticulate pattern).~~
